Many predict that this change would lead to petróleo and cheap gas costs for the average consumer in North America. History of the photo of the Keystone XL Corteséa: Djedzura/Istockphoto La Tuberáa Keystone XL was an important issue for three US presidents, however, in last instance, it is a commercial project. For favorable questions such as this, see the documentation in the future. Photo Corteséa. Berkut_34/Istockphoto La Tuberáa Keystone XL is a very disputed multinational construction project. It contains a lot of a ostile information that can solve many possible problems it has. Instead of reducing gasoline prices, there were statements that they could raise them, at least for the west medium. In 2017, TransCanada resubmitted the construction proposal to President Donald TrumpeÁÁAs administration, and he approved it. The project leader is a Canadian energy firm called TransCanada Energy, and there are a handful of American oil firms that also agreed to pay for portions of the pipelineÁÁAs construction. Currently, the pipelineÁÁAs construction seems to be a thing of the past. In some areas, the pipeline would disrupt the quiet enjoyment of the land that tribes owned through centuries-old treaties. The Keystone XL pipeline caused debates in the social, environmental, economic, and political arenas. However, that decision was short-lived; in 2021, President Joe Biden revoked the permit. After a decade of on-again, off-again status with no construction taking place, TransCanada Energy officially ended the project in 2021. Read-only. Photo Courtesy: Oronat Taesuwan/IstockPhoto The Keystone XL Pipeline has been a mainstay in international news for the greater part of a decade. Conversely, opponents of the project cited environmental concerns and land ownership rights as reasons not to move forward. For now, further developments on the project are at an impasse, but there is still a legal battle due to the fallout of back-and-forth agreements over the project by three United States Presidents. I don't mean to dwell...but I can't help myself. Some say the construction of the pipeline would create nearly 30,000 jobs while a study by Cornell University suggested it would only require less than 10,000 employees. Many pundits in political and economic arenas touted the massive project as a much-needed economic stimulus to the country. The company filed a claim with NAFTA in November 2021.
